

## ADOBE CONNECT: Sharing the presentation

If you want to share a prepared presentation in your webinar, you can do it in the share pod, the choice *Share Document*. Then you select a specific document that you want to share. And you don't just have to share only the presentation here, it can also be other file types (I suggest you to try before you start the webinar so you know that the file is displayed correctly).

You may also draw or use a pointer in a shared presentation, and you can, obviously, browse through the pages of the presentation. If you want, you can switch the presentation to the full screen.
