

ADOBE CONNECT: Share my screen

Another useful feature in Adobe Connect is to share your computer screen. This is useful if you want to show your web site, the functions of a program or sharing the presentation via MS PowerPoint. You can run this feature via the Sharing pod, by selecting *Share my screen*. This gives you a choice of each application window you are running.

In this mode, you will be switched from Adobe Connect to the selected application environment, and Adobe Connect control window will appear in the lower right corner (depending on where you move this window). Through this control window, you can pause, stop sharing, use chat and other features just like you do normally in an app environment of Adobe Connect.
